

## **A CONCISE EXPLANATION OF THE RELEVANCE OF THE NON-ENGLISH LANGUAGE REFERENCES**

The purportedly relevant part of the document cited by the examiner of the Chinese State Intellectual Property Office (SIPO) is the abstract, Fig 1-5 and the corresponding description in the specification (Page 9, Line 9 to Page 15, Line 27), which in the family document US20040017798A1 is Paragraph 55 to Paragraph 87. The first Office Action of SIPO alleges that claims 1-2, 5-6, 7-8,11-12 don't involve an inventive step in view of CN1430840A.

## **ENGLISH TRANSLATION- ABSTRACT OF CN1430840A**

The invention proposes a system and method for providing a connection in a communication network which comprises several network elements and is adapted to route a connection via a first network element such as a radio network controller and one or more of alternatively selectable second network elements such as serving nodes. The network comprises a network element which stores a list of selectable second network elements. The list is accessed using an identifier identifying a routing or location area or a desired second network element. The list can be stored in a DNS server which returns to an inquiring network element such as a radio network controller, e.g. IP addresses of serving nodes capable of serving a routing or location area of a connection originating or terminating network element. The connection originating or terminating network element may also be adapted to send an identifier identifying a specific network element such as an SGSN to which it desires to be connected.
